

Understanding LEED Project Costs & Returns

Presented by the U.S. Green Building Council

This course is designed to help those working on a LEED project team learn how to handle cost issues to build more environmentally and economically sound projects. Information on construction and life-cycle costs are introduced using LEED certified project case studies and current research data. The course also provides tools to calculate and evaluate the costs and benefits of LEED certification and strategies to maximize resource selections.

LEARNING OBJECTIVES

After completing this course, you will be able to:

- Understand importance of clearly expressed client goals on a green project.
- Calculate cost/benefit of building green
- Communicate associated benefits to clients seeking a green building
- Use tools to calculate and evaluate cost/benefit of LEED Certification

WHO SHOULD ATTEND?

Industry professionals seeking to increase their understanding of the LEED Rating Systems and green building strategies, benefits and resources:

- Architects
- Engineers
- Owners
- Manufacturers
- Developers
- Designers
- Consultants
- Contractors
- Government Officials

LEARNING LEVEL

This is a 300-level course. Consider *Green Building Basics and LEED* or *LEED for New Construction Technical Review* as prerequisites.
